FINDINGS

Executive summary

Four points a manager needs from this report. Shares and ratios are calculated from dashboard totals. Currency is not stated in the report.

1,688M

RevPAR 7,337 at 57.8% occupancy

Four cities, 25 properties and 13 weeks (May to July 2022). ADR is 12,696, and about 42% of sellable room nights go unbooked.

39.2%

Mumbai earns the most: 661M of revenue

Mumbai RevPAR is 8,897, which is 1.65x Hyderabad (5,405). Delhi has the highest occupancy at 60.4%.

+6.8 pts

Weekends fill more rooms, but price stays flat

Weekend occupancy is 62.6% against 55.9% on weekdays. ADR rises only 0.3% (12,725 against 12,682).

4,061

The three weakest properties are all in Hyderabad

Atliq Exotica (Hyderabad) has RevPAR 4,061, occupancy 44.6% and the lowest rating, 2.33.

SCOPE

Scope and data

Method: define the KPIs, then break them down by city, property, platform, category, room class and week. Limit: three months of data, no cost data.

4 cities

Mumbai, Bangalore, Delhi and Hyderabad

25 hotels

Atliq properties, Luxury and Business

13 weeks

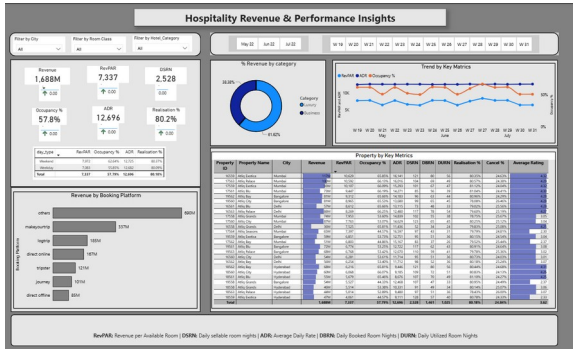

W19 to W31, May to July 2022

1. **How is revenue performing: RevPAR, occupancy, ADR and realisation?**
2. **Which cities, properties and booking platforms drive the revenue?**
3. **How do weekends, hotel categories and room classes differ?**
4. **Which properties underperform, and what should be done first?**

DASHBOARD

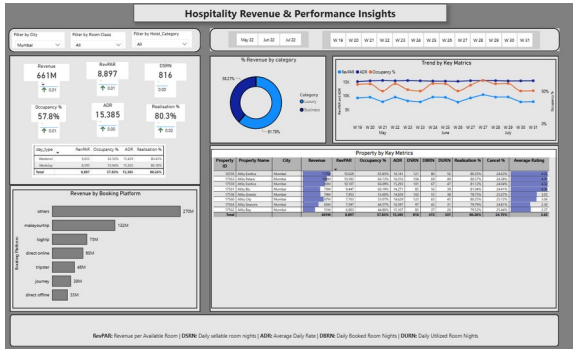

The Power BI dashboard

Slicers: City, Room Class and Hotel Category, plus Month and Week. It is one report page, and every visual responds to every slicer.

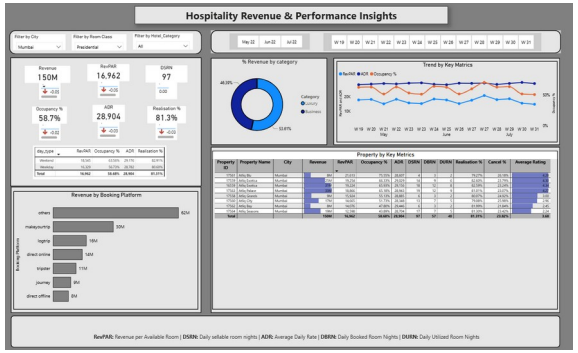

All cities

KPI cards, revenue by category, weekly trend, booking platforms and the property table.

One city (Mumbai)

Choosing a city updates every card, chart and the property table.

One room class (Mumbai, Presidential)

The room class slicer shows RevPAR and ADR for a single class.

KPIS

Four rate KPIs, with weekend and weekday

Overall value first, then weekend and weekday from the day_type table.

RevPAR	**7,337**	Weekend 7,972	**Weekday 7,083**
Occupancy %	**57.8%**	Weekend 62.6%	**Weekday 55.9%**
ADR	**12,696**	Weekend 12,725	**Weekday 12,682**
Realisation %	**80.2%**	Weekend 80.4%	**Weekday 80.1%**

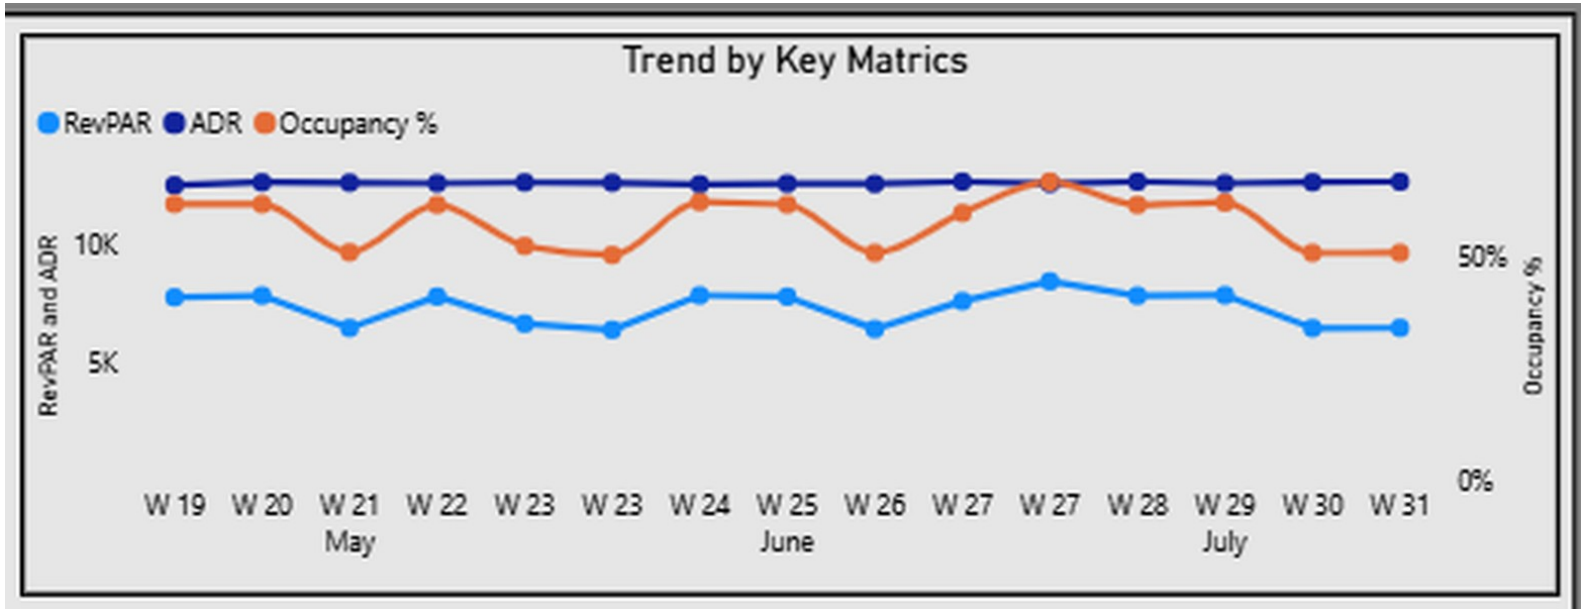

What this means

- Occupancy is booked room nights over sellable ones: 1,461 of 2,528 (DBRN over DSRN), so about 42% go unsold
- Weekend RevPAR is 12.6% above weekday, and it comes from occupancy (+6.8 pts); ADR is almost the same
- Realisation stays near 80% on both day types, so it does not explain the weekend gap

TREND

Occupancy peaks in W27; ADR stays flat

Weekly RevPAR, ADR and occupancy for all cities, taken from the dashboard trend chart.

W27

occupancy peak, in the July part of the week, in every city view

15 points

for 13 weeks: W23 and W27 are split by month

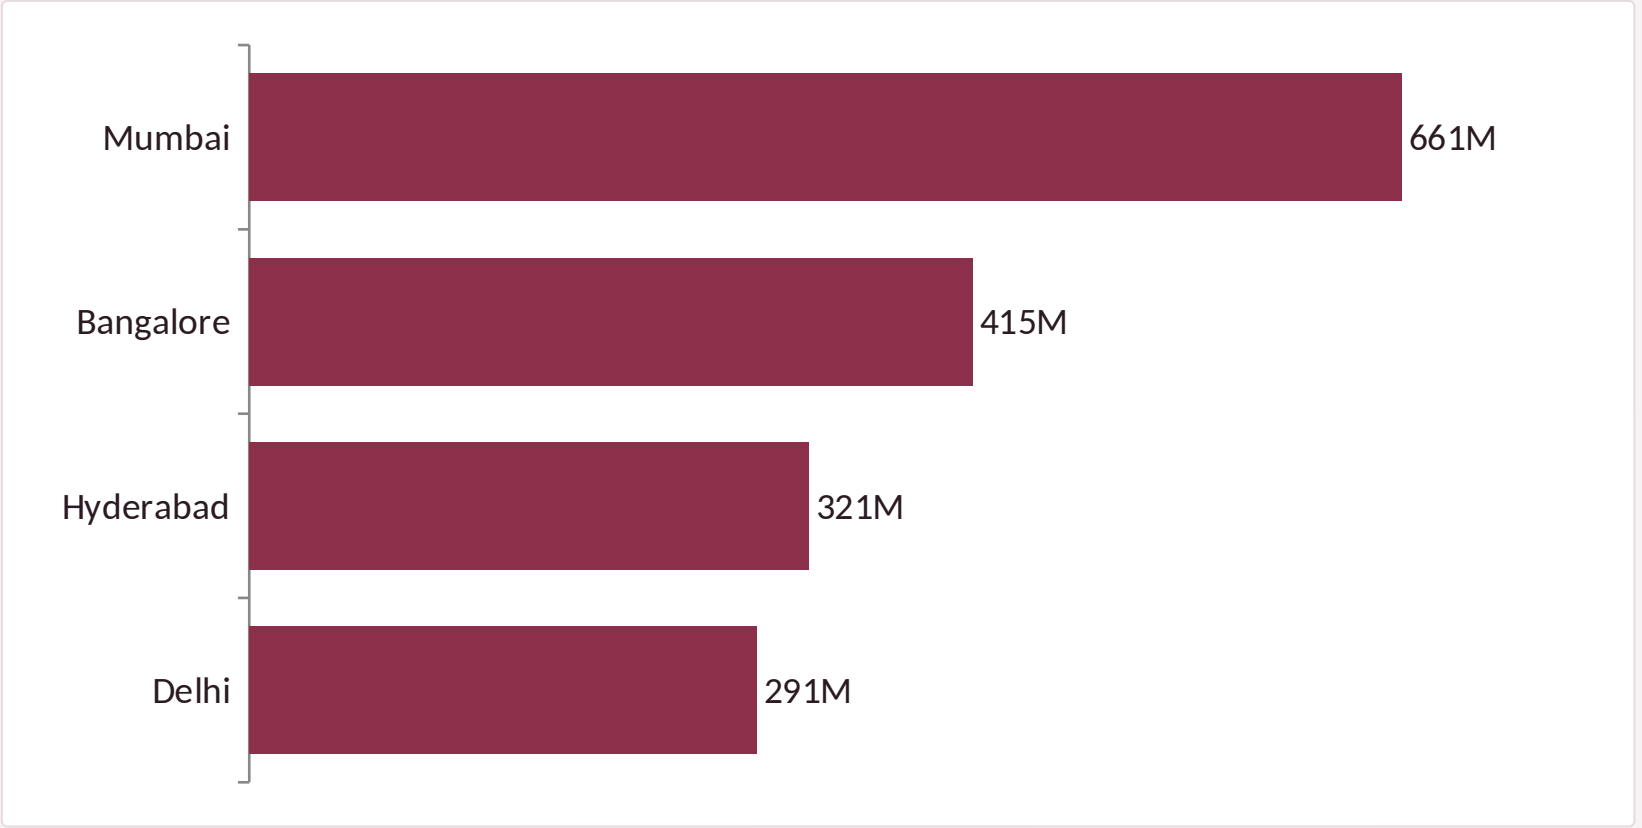

Flat ADR

RevPAR moves with occupancy, not with price

CITIES

Mumbai earns 39% of revenue

Revenue by city, in millions. Mumbai, Bangalore, Hyderabad and Delhi add up to 1,688M.

39.2%

of revenue comes from Mumbai (661M)

19.0%

Hyderabad's share of revenue, from 25.8% of room nights

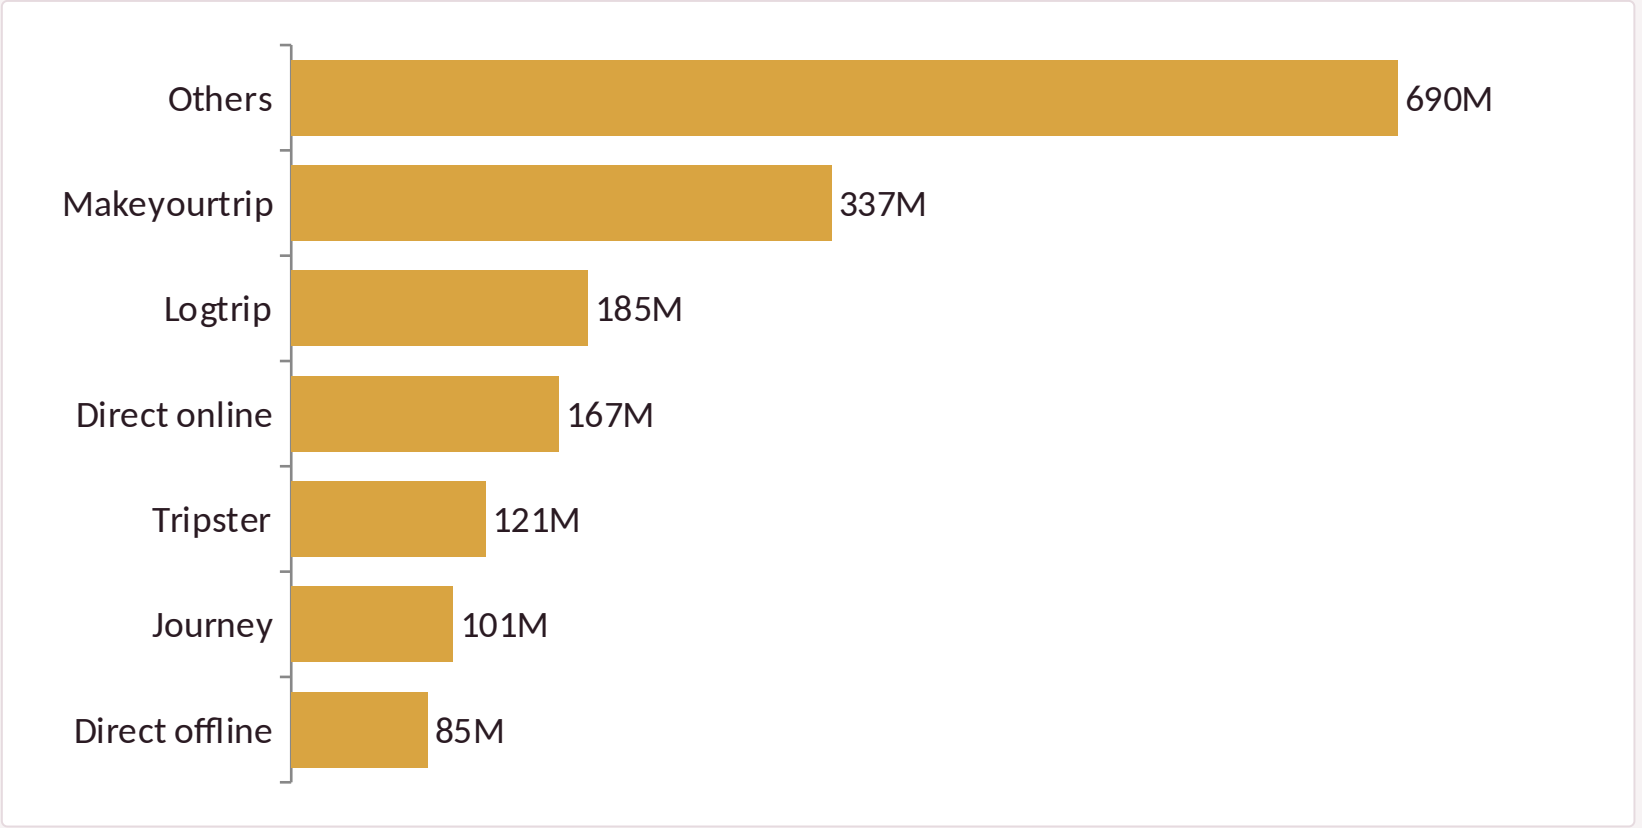

60.4%

Delhi occupancy, the highest of the four cities

PLATFORMS

Others is the largest platform; direct is only 15%

Revenue by booking platform, in millions. Platform names follow the dashboard.

40.9%

of revenue comes from Others (690M)

20.0%

from Makeyourtrip, the largest named platform

14.9%

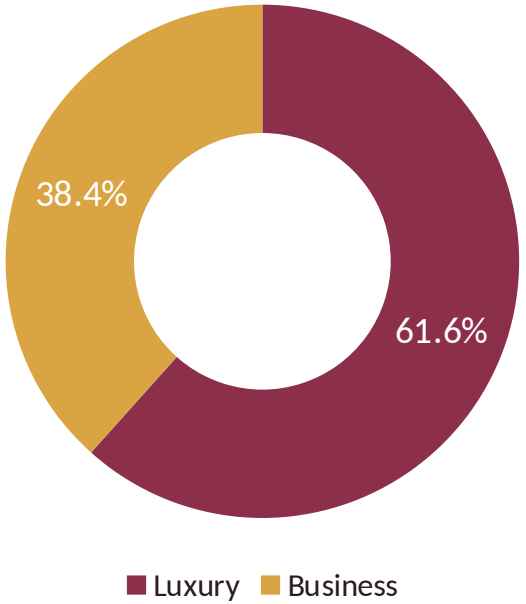

from direct bookings, online and offline (252M)

MIX

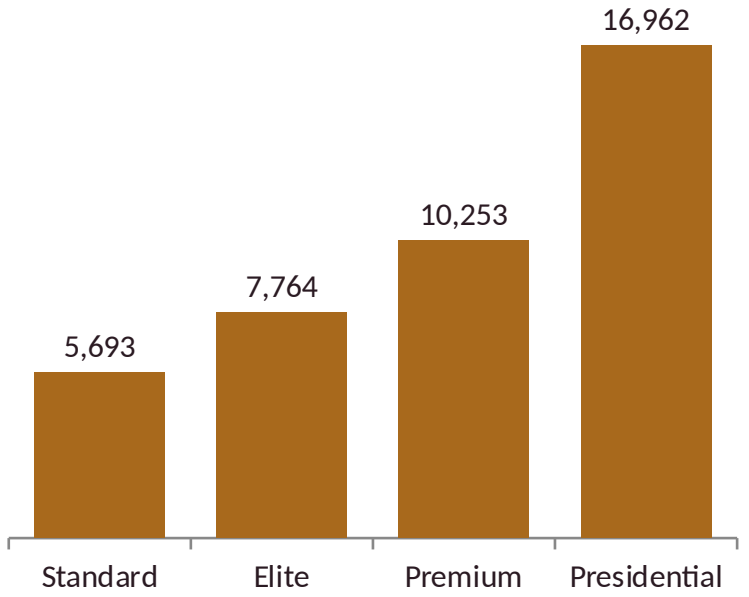

Room class changes price, not occupancy

Luxury brings 61.6% of revenue. The room class figures are for Mumbai.

Revenue by category

RevPAR by room class (Mumbai)

3.0x

Presidential RevPAR over Standard in Mumbai (16,962 vs 5,693)

~58%

occupancy in all four Mumbai room classes (56.6% to 58.7%)

+5.2 pts

Luxury occupancy over Business in Mumbai (59.9% vs 54.7%)

PROPERTIES

Ratings and occupancy move together

The top and bottom three of the 25 properties by RevPAR.

Property	City	RevPAR	Occupancy	Rating
Atliq Exotica (16559)	Mumbai	10,629	65.85%	4.32
Atliq Palace (17563)	Mumbai	10,592	66.13%	4.29
Atliq Exotica (17559)	Mumbai	10,107	66.09%	4.32
Atliq Exotica (18559)	Hyderabad	4,061	44.57%	2.33
Atliq Palace (18563)	Hyderabad	5,014	52.89%	3.07
Atliq Grands (18558)	Hyderabad	5,514	53.38%	3.06

Why it matters

- All top 3 are in Mumbai (rated 4.29 or more) and all bottom 3 are in Hyderabad (rated 2.33 to 3.07)
- Occupancy falls in three tiers that follow ratings: about 65% to 66% at 4.2 and above, about 53% near 3.0, and 44% to 45% near 2.3
- Ratings and occupancy move together; the report cannot say which causes which

COMPARE

Cities differ in price, not in realisation

City comparison, from the property table totals for each city.

City	Revenue	RevPAR	Occupancy	ADR	Realisation	Cancel %
Mumbai	661M	8,897	57.83%	15,385	80.26%	24.75%
Bangalore	415M	7,309	55.68%	13,127	80.10%	25.00%
Hyderabad	321M	5,405	57.98%	9,322	80.38%	24.67%
Delhi	291M	7,349	60.44%	12,159	79.86%	25.03%
Total	**1,688M**	**7,337**	**57.79%**	**12,696**	**80.18%**	**24.84%**

4.8 pts

occupancy gap between Delhi (60.4%) and Bangalore (55.7%)

0.5 pts

realisation range across cities, 79.9% to 80.4%

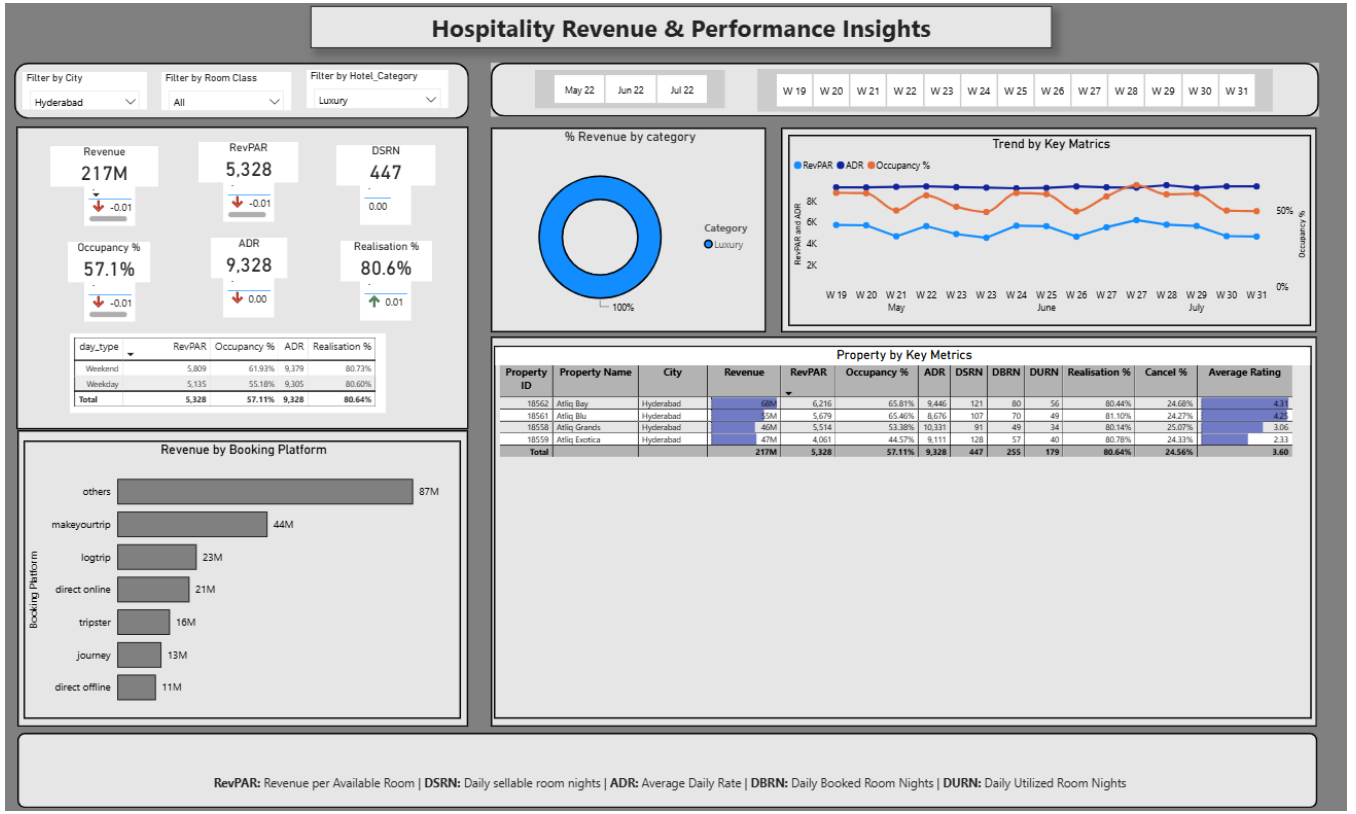

1.65x

Mumbai ADR over Hyderabad (15,385 vs 9,322)

DRILL-DOWN

Drill-down: Hyderabad Exotica is the weak link

Dashboard with City set to Hyderabad and Hotel Category set to Luxury.

- Hyderabad Luxury: 217M revenue, RevPAR 5,328 and occupancy 57.1%
- Atliq Exotica (18559): RevPAR 4,061, occupancy 44.57% and a 2.33 rating
- Atliq Bay and Atliq Blu lead Hyderabad, rated 4.31 and 4.25

LIMITS

Limits of the data

Four limits to keep in mind. Shares and ratios in this deck are calculated from dashboard totals.

1

Three months of data

Weeks W19 to W31 (May to July 2022) only, so there is no seasonality or year-on-year view.

2

Revenue, not profit

The report has no cost data, and it does not state a currency.

3

Realisation and cancellation overlap

80.2% realisation and 24.8% cancellation add up to more than 100%, so they use different bases.

4

Boundary weeks are split

W23 and W27 appear twice on the weekly axis, once per month, so those points likely cover part of a week.

NEXT STEPS

Recommendations

Five actions, in the order I would take them.

1

Fix the three weakest Hyderabad hotels first

Exotica, Palace and Grands have RevPAR of 4,061 to 5,514, against 7,337 overall.

2

Test higher weekend prices

Weekend occupancy is 6.8 pts higher but ADR is only 0.3% higher.

3

Review service at the low-rated hotels

Ratings near 2.3 go with 44% occupancy, against 65% for hotels rated 4.2 and above.

4

Grow direct bookings and break down Others

Direct is 14.9% of revenue, while Others is 40.9% and not explained.

5

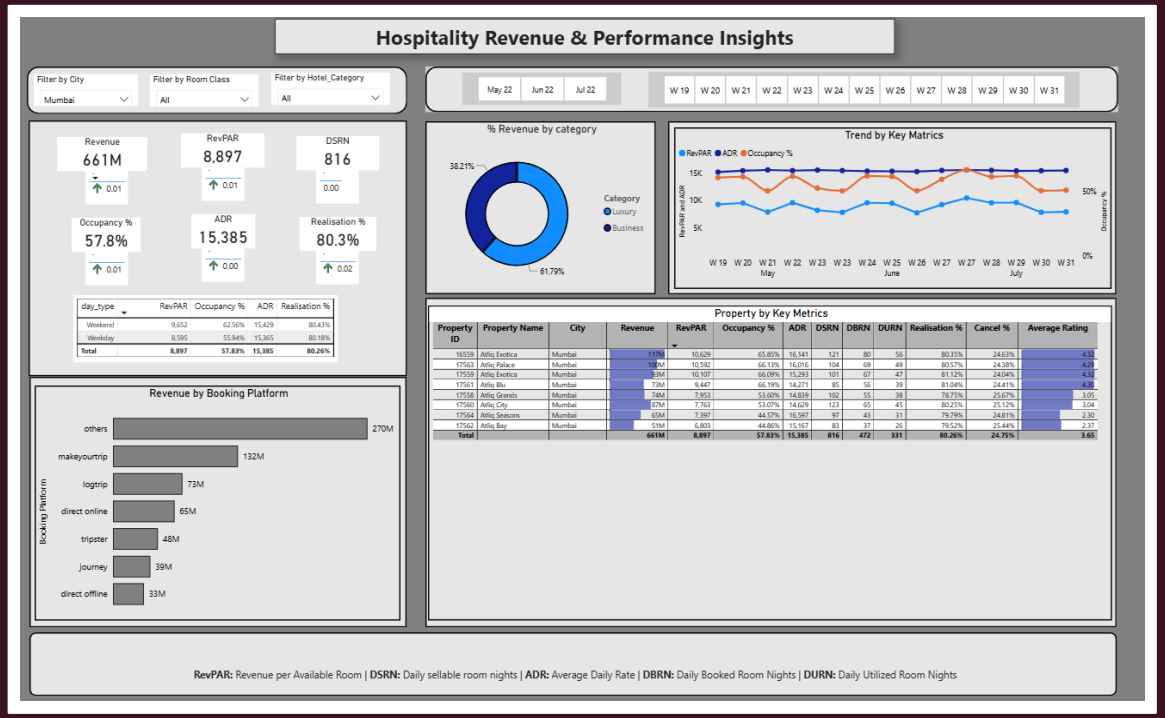

Fix the week axis and add a forecast

W23 and W27 appear twice. Use a week-start date, then add a forecast once more weeks are loaded.

THANK YOU

Questions?

Happy to walk through the Power BI report, or build the same analysis on your own data.
